                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cysteines referred to as the omega pattern. The cysteine framework of these two peptides differs only in the exact amino acid spacing of the two carboxy terminal inter-Cys domains. Beyond the similarity of the framework the two peptides are remarkably divergent. Only nine of the 21 non-Cys amino acids of the omega-GYIA are conserved in the omega-MYIIA. MYIIB and GYIA template domains are each 45 amino acids in length. They also show a >90% conservation of amino acid sequences with only 4 positions of amino acid non-identity. These two sequences illustrate the existence of two highly conserved template domains associated with two structurally dissimilar toxins.
                                                                                                                                                                                                                                                                                                                                                                     Omega-conopeptide; analgesic; anticonvulsant; vasotropic; cardiant; neuroprotective; cerebroprotective; cardiovascular; antinflammatory; antimigraine; antidiabetic; tranquiliser; vulnerary; antipsychotic; anxiolytic; neuroleptic; voltage gated ion channel; seizure; epilepsy, neurological disorder; neurotoxic injury; hypoxia; anoxia; ischaemia; stroke; cerebrovascular accident; brain trauma; spinal chord trauma; stroke; cerebrovascular accident; brain; hypoglycaemic event; pain; migraine; inflammation; cardiovascular disorder; psychiatric disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                from C. geographus. These conotoxins target presynaptic calcium channels and have largely overlapping specificities for different calcium targets in neuronal tissue preparations. These peptides form a four loop folded toxin molecule with a specific arrangement of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        tranquiliser, vulnerary, antipsychotic, anxiolytic and neuroleptic. Peptides of the invention act by modulating the activity of voltage gation channels. They may be used for treating or preventing disorders associated with voltage gated ion channels such as neurological disorders, e.g. seizure (associated with epilepsy), neurotoxic injury associated with conditions of hypoxia, anxia, ischaemia, stroke, cerebrovascular accident, brain or spinal chord trauma, drowning, suffocation, perinatal asphyxia or hypoglycaemic events; pain e.g. migraine; inflammation or cardiovascular disorders. They may also be u for treating psychiatric disorders e.g. psychosis, anxiety or schizophrenia. The analgesic agents of the invention show diminished seffects and toxicity, and are non-addictive. The sequences given in records ABB96595-ABB96697 represent omega-conopeptide propeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequences encoding them, and propeptide sequences. The activity of the peptides of the invention may be described as, analyesic, the peptides of the invention may be described as, analyesic, cardiant, neuroprotective, cerebroprotective,

cc ardiovascular, vasotropic, cardiant, neuroprotective, cerebroprotective, cardiovascular, antinflammatory, antimigraine, antidiabetic, cardiovascular, antinflammatory, antimigraine, antidiabetic, cremptides of the invention act by modulating the activity of voltage gated con channels. They may be used for treating or preventing disorders con channels. They may be used for treating or preventing disorders consociated with voltage gated ion channels such as neurological consociated with conditions of hypoxia, anoxia, ischaemia, stroke, cc associated with conditions of hypoxia, anoxia, ischaemia, stroke, cc associated with conditions of hypoxia, anoxia, ischaemia, drowning, cc suffocation, perinatal asphyxia or hypoglycaemic events; pain e.g. cc suffocation, perinatal asphyxia or hypoglycaemic events; pain e.g. cc migraine; inflammation or cardiovascular disorders. They may also be used configuration psychiatric disorders e.g. psychosis, anxiety or for treating psychiatric disorders e.g. psychosis, anxiety or cardiovascular of the invention show diminished side schizophrenia. The analgesic agents of the invention show diminished side effects and toxicity, and are non-addictive. The sequences given in crecords ABB96595-ABB96697 represent omega-conopeptide propeptide

Peptides of the invention act by modulating the activity of voltage gation channels. They may be used for treating or preventing disorders associated with voltage gated in channels such as neurological disorders, e.g. selzure (associated with epilepsy), neurotoxic injury associated with conditions of hypoxia, anoxia, ischaemia, stroke, cerebrovascular accident, brain or spinal chord trauma, drowning, suffocation, perinatal asphyxia or hypoglycaemic events; pain e.g. migraine; inflammation or cardiovascular disorders. They may also be u for treating psychiatric disorders e.g. psychosis, anxiety or schizophrenia. The analgesic agents of the invention show diminished seffects and toxicity, and are non-addictive. The sequences given in records ABB96595-ABB96697 represent omega-conopeptide propeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated omega-conopeptides, nucleic acid sequences encoding them, and propeptide sequences. The activity of the peptides of the invention may be described as, analgesic, anticonvulsant, vasotropic, cardiant, neuroprotective, cerebroprotective, cardiovascular, antinflammatory, antimigraine, antidiabetic,

                                                                                                                                                                                                                                                                        The invention relates to isolated omega-conopeptides, nucleic acid consequences encoding them, and propeptide sequences. The activity of the peptides of the invention may be described as, analgesic, anticonvulsant, vasotropic, cardiant, neuroprotective, cerebroprotective, cardiovascular, antinflammatory, antimigraine, antidiabetic, tranquiliser, vulnerary, antipsychotic, anxiolytic and neuroleptic. Peptides of the invention act by modulating the activity of voltage gated in channels. They may be used for treating or preventing disorders associated with voltage gated ion channels such as neurological consociated with conditions of hypoxia, anoxia, ischaemia, stroke, associated with conditions of hypoxia, anoxia, ischaemia, stroke, cassociated with conditions of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of hypoxia, anoxia, ischaemia, stroke, conference, perinatal asphyxia or hypoglycaemic events; pain e.g. conference, inflammation or cardiovascular disorders. They may also be used for treating psychiatric disorders e.g. psychosis, anxiety or schizophrenia. The analgesic agents of the invention show diminished side effects and toxicity, and are non-addictive. The sequences given in records ABB96595-ABB96697 represent omega-conopeptide propeptide
                                                                                                                                                 Query Match

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 1, Application US/07689693B Patent No. 5231011 GENERAL INFORMATION:
                                                                                                                                                                                                              TELEPHONE: (801) 566-6;
TELEFAX: (801) 566-075;
INFORMATION FOR SEQ ID NO:
SEQUENCE CHARACTERISTICS:
LENGTH: 71 amino acids
                                                                                                                                                                                                                                                                                                             ATTORNEY AGENT INFORMATION:
NAME: Western, M. Wayne
REGISTRATION NUMBER: 22,788
REFERENCE/DOCKET NUMBER: 9925
TELECOMMUNICATION INFORMATION:
TELEPHONE: (801) 566-6633
FRATURE:

NAME/KEY: Prepropeptide sequence for four-loop

NAME/KEY: MVIIB Omega conotoxin from Conus magus.

IDENTIFICATION METHOD: Libraries were created

TOENTIFICATION METHOD: using oilgo-dT primed pUC13 vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              COMPUTER READABLE FORM:

Pred. No. is the number of results predicted by chance to have
score greater than or equal to the score of the result being
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   May 20, 2003, 15:41:00 ; Search time 51.0312 Seconds (without alignments)

The activity of completed sequences. The activity of the peptides of the invention may be described as, analgesic, anticonvulsant, vasotropic, cardiant, neuroprotective, cerebroprotective, cardiant, neuroprotective, cerebroprotective, cardiant, neuroprotective, cerebroprotective, cerebroprotective, anticological completes, vulnerary, antipsychotic, anxiolytic and neuroleptic. Cerebrovascular, antipsychotic, anxiolytic and neuroleptic. Cerebrovascular may be used for treating or preventing disorders cassociated with voltage gated ion channels such as neurological cerebrovascular accident, brain or spinal chord trauma, drowning, cerebrovascular inflammation or cardiovascular disorders. They may also be used contracting psychiatric disorders e.g. psychosis, anxiety or cardiovascular disorders. They may also be used contracting psychiatric disorders e.g. psychosis, anxiety or cardiovascular disorders. They may also be used capents and toxicity, and are non-addictive. The sequences given in cardiovascular disorders e.g. psychosis, anxiety or records ABB96807-ABB96905 represent omega-conopeptide toxin sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cc anticonvulsant, vasotropic, cardiant, neuroprotective, cerebroprotective, cardiovascular, vasotropic, cardiant, neuroprotective, cerebroprotective, cardiovascular, antiinflammatory antimigraine, antidiabetic, cutranquiliser, vulnerary, antipsychotic, anxiolytic and neuroleptic. CC tranquiliser, vulnerary, antipsychotic, anxiolytic and neuroleptic. Cc espiddes of the invention act by modulating the activity of voltage gated ion channels guch as neurological cassociated with voltage gated ion channels such as neurological cc associated with conditions of hypoxia, anoxia, isohaemia, stroke, CC espedrovascular accident, brain or spinal chord trauma, drowning, CC cerebrovascular accident, brain or spinal chord trauma, drowning, CC cerebrovascular accident, brain or spinal chord trauma, drowning, CC engraine; inflammation or cardiovascular disorders. They may also be used CC migraine; inflammation or cardiovascular disorders. They may also be used CC effects and toxicity, and are non-addictive. The sequences given in CC effects and toxicity, and are non-addictive. The sequences given in crecords ABB96807-ABB96905 represent omega-conopeptide toxin sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to isolated omega-conopeptides, nucleic acid sequences encoding them, and propeptide sequences. The activity of the peptides of the invention may be described as, analgesic, anticonvulsant, vasotropic, cardiant, neuroprotective, cerebroprotectives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1(a); Page 72; 195pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated omega-conopeptides, nucleic acid consequences encoding them, and propeptide sequences. The activity of the peptides of the invention may be described as, analgesic, continuously the invention may be described as, analgesic, continuously the invention may be described as, analgesic, continuously the activity of continuously the activity of the invention act by modulating the activity of voltage gated conchannels. They may be used for treating or preventing disorders conchannels. They may be used for treating or preventing disorders consociated with voltage gated ion channels such as neurological conformation of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of hypoxia, anoxia, ischaemia, drowning, conformation, perinatal asphyxia or hypoglycaemic events; pain e.g. conformation or cardiovascular disorders. They may also be used conformation and toxicity, and are non-addictive. The sequences given in cecords ABB96597-ABB96697 represent omega-conopeptide propeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to isolated omega-conopeptides, nucleic acid CC sequences encoding them, and propeptide sequences. The activity of CC the peptides of the invention may be described as, analgesic, cardinous. The activity of CC anticonvulsant, vasotropic, cardiant, neuroprotective, cerebroprotective, cardiovascular, antiinflammatory, antimigraine, antidiabetic, cc tranquiliser, vulnerary, antipsychotic, anxiolytic and neuroleptic. CC tranquiliser, vulnerary, antipsychotic, anxiolytic and neuroleptic. CC eptides of the invention act by modulating the activity of voltage gated con channels. They may be used for treating or preventing disorders cc associated with voltage gated ion channels such as neurological CC disorders, e.g. seizure (associated with epilepsy), neurotoxic injury CC associated with conditions of hypoxia, anoxia, ischaemia, stroke, CC cerebrovascular accident, brain or spinal chord trauma, drowning, CC suffocation, perinatal asphyxia or hypoglycaemic events; pain e.g. CC migraine; inflammation or cardiovascular disorders. They may also be used CC for treating psychiatric disorders e.g. psychosis, anxiety or cschizophrenia. The analgesic agents of the invention show diminished side effects and toxicity, and are non-addictive. The sequences given in creating psychosis, analgesic agents of the invention show diminished side effects and toxicity, and are non-addictive. The sequences given in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated omega-conopeptides, nucleic acid cc sequences encoding them, and propeptide sequences. The activity of cc the peptides of the invention may be described as, analgesic, the peptides of the invention may be described as, analgesic, canticonvulsant, vasotropic, cardiant, neuroprotective, cerebroprotective, cardiavascular, antiinflammatory, antimigraine, antidiabetic, cardiavascular, antiinflammatory, antimigraine, antidiabetic, cardiavascular, antiinflammatory, antimigraine, antidiabetic, cardiavascular, antipsychotic, anxiolytic and neuroleptic. Cc peptides of the invention act by modulating the activity of voltage gated ion channels such as neurological cc cassociated with voltage gated ion channels such as neurological cc disorders, e.g. seizure (associated with epilepsy), neurotoxic injury cc associated with conditions of hypoxia, anoxia, ischaemia, stroke, cc grebrovascular accident, brain or spinal chord trauma, drowning, cc erebrovascular accident, brain or spinal chord trauma, drowning, cc suffocation, perinatal asphyxia or hypoglycaemic events; pain e.g. cc schizophrenia. The analgesic agents of the invention show diminished side effects and toxicity, and are non-addictive. The sequences given in cc records ABB96807-ABB96905 represent omega-conopeptide toxin sequences.

```
The invention relates to isolated omega-conopeptides, nucleic acid consequences encoding them, and propeptide sequences. The activity of the peptides of the invention may be described as, analyesic, canticonvulsant, vasotropic, cardiant, neuroprotective, cerebroprotective, comparing an initial production and neuroleptic.

CC cardiovascular, antiinflammatory, antiinigraine, antidiabetic, cerebroprotective, cerebroprotective, cardiant, neuroprotective, cerebroprotective, cerebroprotective, cardiant, antiinflamatory, antiinigraine, antidiabetic, cerebroprotective, cerebroprotective, cerebroprotective, cerebroprotective, cardiant, antivity of voltage gated con channels. They may be used for treating or preventing disorders consociated with voltage gated ion channels such as neurological consociated with voltage gated ion channels such as neurological consociated with conditions of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of hypoxia, anoxia, ischaemia, drowning, consociated with conditions of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of hypoxia, anoxia, ischaemia, drowning, consociated with conditions of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of hypoxia, anoxia, ischaemia, drowning, consociated with conditions of hypoxia, anoxia, ischaemia, drowning, consociated with conditions of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of h

                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated omega-conopeptides, nucleic acid consequences encoding them, and propeptide sequences. The activity of the peptides of the invention may be described as, analyssic, cardiant, vasotropic, cardiant, neuroprotective, cerebroprotective, cardiovascular, antiinflammatory, antimigraine, antidiabetic, cardiovascular, antiinflammatory, antimigraine, antidiabetic, cardiovascular, antiinflammatory, antimigraine, antidiabetic, concludes of the invention act by modulating the activity of voltage gated con channels. They may be used for treating or preventing disorders con channels. They may be used for treating or preventing disorders consociated with voltage gated ion channels such as neurological consociated with conditions of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of hypoxia, anoxia, ischaemia, drowning, consociated with conditions of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of hypoxia, anoxia, ischaemia, drowning, consociated with conditions of hypoxia, anoxia, ischaemia, drowning, consociated with conditions of hypoxia, anoxia, ischaemia, stroke, consociated with conditions of hypoxia, anoxia, ischaemia, drowning, consociated with encountered with e

The invention relates to isolated omega-conopeptides, nucleic acid CC sequences encoding them, and propeptide sequences. The activity of CC the peptides of the invention may be described as, analyssic, cCC anticonvulsant, vasotropic, cardiant, neuroprotective, cerebroprotective, CC cardiovascular, antiinflammatory, antingraine, antidabetic, cCC tranquiliser, vulnerary, antipsychotic, anxiolytic and neuroleptic. CC peptides of the invention act by modulating the activity of voltage gated ion channels. They may be used for treating or preventing disorders CC associated with voltage gated ion channels such as neurological CC associated with conditions of hypoxia, anoxia, ischaemia, stroke, CC associated with conditions of hypoxia, anoxia, ischaemia, stroke, CC cerebrovascular accident, brain or spinal chord trauma, drowning, CC suffocation, perinatal asphyxia or hypoglycaemic events; pain e.g. CC migraine; inflammation or cardiovascular disorders. They may also be used CC creating psychiatric disorders e.g. psychosis, anxiety or CC schizophrenia. The analgesic agents of the invention show diminished side effects and toxicity, and are non-addictive. The sequences given in CC records ABB96595-ABB96697 represent omega-conopeptide propeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Olivera BM,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to 14 novel mature conotoxin peptides from marine snails (Conus species); conotoxin precursor proteins; and cDNAs encoding the conotoxin precursors. The mature peptide sequences were discovered by obtaining conotoxin cDNA sequences from mRNA from the brocade cone shell (Conus textile) or the line cone shell (Conus striatus). The cDNA sequences were used to determine the conotoxin precursor protein sequences, and the sequences of the mature conotoxin peptides were inferred from the precursor sequences. The mature conotoxin peptides can be obtained via chemical synthesis or by in vitro gene expression. Conotoxins inhibit the function of neurons and muscle gene expression. Conotoxins inhibit the function of neurons and muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CN1237584-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Conus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     gene expression. Conotoxins inhibit the function of neurons and muscle cells. Certain conotoxins interfere with synaptic transmission, while others act on muscle or at the neuromuscular junction. The 14 novel conotoxins have unique receptor specificity and affinity, so can be used as screening tools to identify new drugs. Conotoxin #11 (AAx87540, may be used for pain relief. Sequences AAY87420, AAY87522, AAY87524, may be AAY87528, AAY87530, AAY87532, AAY87534, AAY87536, AAY87540, AAY87542, AAY87544, AAY87544, AAY87544 and AAY87546 represent mature conotoxins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1A;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               brocade cone shell (Conus textile) or the line cone shell (Conus striatus). The cDNA sequences were used to determine the conotoxin precursor protein sequences, and the sequences of the mature conotoxin peptides were inferred from the precursor sequences. The mature peptides were inferred from the precursor sequences. The mature conotoxin peptides can be obtained via chemical synthesis or by in vitro conotoxin peptides can be obtained via chemical synthesis or by in vitro conotoxin peptides can be obtained via chemical synthesis or by in vitro conotoxin conotoxins inhibit the function of neurons and muscle gene expression. Conotoxins inhibit the function. The 14 novel cells. Certain conotoxins interfere with synaptic transmission, while others act on muscle or at the neuromuscular junction. The 14 novel conotoxins have unique receptor specificity and affinity, so can be conotoxins have unique receptor specificity and affinity, so can be conotoxins have unique receptor specificity and affinity. CC tranquiliser, vulnerary, antipsychotic, anxiolytic and neuroleptic. CC peptides of the invention act by modulating the activity of voltage gated in channels such as neurological conclanted. They may be used for treating or preventing disorders associated with voltage gated ion channels such as neurological consociated with conditions of hypoxia, anoxia, ischaemia, stroke, CC disorders, e.g. seizure (associated with epilepsy), neurotoxic injury cassociated with conditions of hypoxia, anoxia, ischaemia, stroke, CC cerebrovascular accident, brain or spinal chord trauma, drowning, CC suffocation, perinatal asphyxia or hypoglycaemic events; pain e.g. CC migraine; inflammation or cardiovascular disorders. They may also be used for treating psychiatric disorders e.g. psychosis, anxiety or CC schizophrenia. The analgesic agents of the invention show diminished side refects and toxicity, and are non-addictive. The sequences given in ccords ABB96807-ABB96905 represent omega-conopeptide toxin sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Best Loc
